

## Core Topics

# Family Planning Update

## A two-day Foundation Certificate Course

### Why learn About Family Planning?

Over the decades there has been a substantial increase in contraceptive use in India. However, meeting the contraceptive needs of considerable proportions of women and men and improving the quality of family planning services continue to be a challenge. There are still significant levels of demand for Family planning that are unmet. If these unmet needs are met, unintended pregnancies would be fewer; women's health and lives would be improved, and the consequent impact on fertility would result in lower population growth and measured development benefits.

Family planning is a core component of all the health related programs. There is a huge demand in the market for skilled experts in the field of Family planning in government and non-government/ international organizations.

***Family Planning is an indispensable part of any Health initiative in 21<sup>st</sup> Century***

- **Current Scenario of Family planning in India**
- **Unmet need of Family Planning**
